

## **A (Partial) Map OF nominal functional structure**

Guglielmo Cinque - University of Venice

In addition to briefly reviewing the evidence in favor of the functional projections postulated in the literature for the extended projection of the NP, I will

- 1) advance some conjectures concerning the position of certain other nominal modifiers.
- 2) provide evidence for the presence of numeral classifiers even in “non-numeral classifier languages” like Italian.
- 3) discuss evidence for the existence of two more specific functional projections (diminutive/augmentative and endearing/pejorative).
